WORK EXPERIENCE

AI Full Stack Engineer - Data Intelligence Team, Wells Fargo - New York, NY Oct. 2025 – Present

- Architected a high-priority AI Data Intelligence platform using TypeScript/React and Python (FastAPI) to deliver scalable organizational insights
- Refactored security architecture by implementing JWT (Bearer Token) authentication; eliminated legacy vulnerabilities and achieved 100% OpenAPI/REST compliance
- Centralized identity management with automated token expiration and secure handshakes, significantly hardening the application's security posture
- Optimized FastAPI backend services, reducing API response latency by 20% through refactored middleware and efficient service integration
- Built a Playwright/Gherkin test automation framework on HyperExecute, reducing manual QA overhead by 70% in cloud environments
- Attained 75% unit test coverage and resolved 2 high-severity vulnerabilities identified through SonarQube remediation
- Engineered a real-time AI metrics dashboard to track token consumption and system performance, enabling data-driven cost optimization

Software Engineer - Counterparty Risk Team, Wells Fargo - New York, NY July 2024 – Oct. 2025

- Built a C#/NET (WPF) desktop application used by specialized trading desks to automate and scale financial counterparty risk assessments
- Engineered a custom job processor using Hangfire, replacing slow legacy systems (AutoSys) and significantly accelerating task execution
- Led full-stack feature delivery and critical bug fixes across the entire SDLC within an Agile environment for high-availability financial tools

Software Engineering Intern, Wells Fargo - Charlotte, NC June 2023 – Aug. 2023

- Developed an OpenFin application using C#.NET and React to automate repository and version maintenance across multiple services
- Architected a C# API with LibGit2Sharp for automated branch and repo management, slashing production build time by 55% and saving 2–3 hours of manual labor per dev

Software Engineering Intern, L3 Harris - Nashville, TN June 2022 – Aug. 2022

- Developed a Forward-Looking Infrared (FLIR) sensor simulation app with C# to expand sensor testing capabilities
- Encoded and decoded over 20 messages for secure communication between the interfacing system and the FLIR system
- Integrated an internal geospatial engine to support the sensor's positional data relative to Earth

EDUCATION

Lehigh University

Bachelor of Science in Computer Science

- Graduated with High Honors

May 2024

Bethlehem, PA

SKILLS

Programming Languages: Python (FastAPI), TypeScript, JavaScript, Go, C#, SQL, HTML/CSS

AI & Data Engineering: LLM Tool Calling, Agentic Workflows, Semantic Search, MongoDB, PostgreSQL, ETL Development, Cohere NLP

Frameworks & Libraries: React, Node.js, Express, .NET, Jest, Cypress, Playwright, Gherkin, Tailwind CSS, Vite
